Description

The Navetta 37, is the new semi-displacement flagship and the largest ever built by Custom Line. This new super yacht conveys the values of seaworthiness, comfort, safety and customisation - all part of Custom Line's DNA - into a revolutionary product in terms of style, design and space, placing at the top of its class. The Navetta 37 is 37 metres long with a maximum beam of 8 metres. It features a new semi-planing hull with a bulbous bow that ensures the utmost efficiency in any sea conditions. It impresses with its clean lines, well-balanced spaces and meticulous attention to every detail, which makes it an incredibly innovative yacht with a timeless style. Created from the collaboration between the Strategic Product Committee, which the Ferretti Group is proud to include Mr Piero Ferrari, the Engineering Department and the Zuccon International Project Studio, this yacht features harmonious contours and stylistic features unseen before. Its clean, streamlined, light design also conveys great stability and strength.

The front of the hull rises up to the first superstructure level. This adds a sense of power and character to the bow, giving this super yacht an imposing presence on the water too. The large control room with built-in bridge covers the bow area on the upper deck: it is equipped with five monitors, including two multi-touch screens, which let you effortlessly control the main on-board systems. Just like all the latest Custom Line yachts, the Navetta 37 is equipped with the VOTIS infotainment system, which replaces all the remote controls for the various devices with a single unit and can be extended to the automation system in every area on the yacht. What's more, owners and guests can manage it with their smartphones or tablets.

This new super yacht represents a major step forward in terms of acoustic comfort. In addition to a special flexible joint in the transmission lines that absorbs vibrations from the axis line, the Ferretti Group engineers have worked with specialists to design innovative solutions minimising the impact of sound through targeted mathematical analysis conducted for each source of noise and its on-board location. The concept of comfort and safety is also an important goal when at anchor with the electro-hydraulic stabilising fins, featuring both underway and zero speed modes, which reduce rolling and are standard. Gyroscopic stabilisers can also be added upon request. In addition to the underwater lights installed on the stern and bulwark, a very useful light has been fitted onto the bulbous bow, ensuring improved safety while navigating and manoeuvring at night.

5 CABINS + 4 CREW

LOA: 121.6ft - 37.04m

DRAFT: 2.27m

BEAM: 8m
